

TRIATHLONBAG II

ABSTRACT: The triathlonbag is used for the rapid identification and segregation of triathlon equipment. The bag comprises a water-resistant base (11) to which water-resistant front and rear shells are connected with a waterproof closure device (16). Storage areas of meshed material are disposed on the interior (17, 18, 19) and exterior (1,3,4,5,6) surfaces of the shells and, along with a removable mesh cylinder (20), allow segregation of wet and dry items and rapid visual identification of and access to the equipment. This triathlonbag may be transported either as a duffel bag or as a backpack.
